

Dear Hiring Team,

I am a final-year Integrated M.Tech student in Artificial Intelligence at VIT Bhopal, and I am excited to apply for the AI Engineering opportunity at Tekion.

What attracted me most to Tekion is the opportunity to work on large-scale AI systems that create measurable business impact. The vision of building intelligent platforms powered by agentic AI, large language models, retrieval systems, and machine learning aligns closely with the projects and technologies I have been exploring throughout my academic journey.

During my studies, I have worked on projects involving AI-powered multi-agent systems, distributed data pipelines using PySpark and Apache Airflow, and deep learning applications in computer vision. These experiences strengthened my skills in Python, FastAPI, machine learning, data engineering, API development, and scalable system design. I have also gained hands-on experience with Docker, SQL databases, ETL pipelines, and modern AI development workflows.

I am particularly interested in Tekion's focus on building reliable AI infrastructure, intelligent retrieval systems, and scalable platforms that enable real-world AI applications. The opportunity to contribute to systems involving LLMs, agent orchestration, data pipelines, and model deployment is both challenging and exciting.

Beyond technical skills, I enjoy learning new technologies, solving complex problems, and collaborating with teams to build impactful solutions. I am eager to contribute, learn from experienced engineers, and grow within an innovative environment such as Tekion.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my skills, projects, and enthusiasm for AI engineering can contribute to Tekion's mission.

Sincerely,

Vidhika Jain

Integrated M.Tech (Artificial Intelligence)
